

Accessories Options & Custom Development

Accessories:

We offer an extensive line of pressure and temperature accessories to help make your design, development and installation easy.

Simply tell us your specifications and we can send you a sensor ready to go to work.

- Brackets, Clamps & Shock Isolation Assemblies.
- Sub-Assembly Packaging & Support.
- Special Marking or Packaging.
- Mating Connectors.
- Replaceable Seals.
- Cable Assemblies.
- Extraction Tools.
- Port Adapters.
- Snubbers.

Options:

Need something a little different?

With over 60 years and thousands of products, we support just about any industry and special request.

Special Testing?

Different Material?

A Specific Connector or Cable?

A Different Pressure Range?

A Different Pressure Port?

PAINÉ

PRESSURE INSTRUMENTATION
FOR THE TOUGHEST APPLICATIONS

Custom Development:

For over 60 years, we have developed, manufactured and supported companies just like yours, with some of the most highly recognized and recommended state-of-the-art pressure and temperature instrumentation in the world.

"Our scientific personnel, engineering, production and quality minded staff members are dedicated to the development of new products and improving the services we provide by advancing the science and technology of pressure and temperature measurement."

We strive to bring valuable new products to the markets through advancements in new technologies and partnerships with companies such as yours.

Engineering: Our Engineers help customers transition pressure and temperature measurement requirements into reality. With design experience in the fields of Aerospace, Military, Nuclear, Geophysical, Petrochemical, Oceanographic and Industrial, our staff is ready to help support your next project or program.

Advanced Machining & Fabrication: Our facility has some of the most state of the art machining equipment in the industry. Equipment that can support just about any project imaginable. *Machining Capabilities: CNC work centers, multi-spindle lathes, horizontal and vertical mills. Specialized machining and tooling processes capable of handling Titanium, Inconel® and more. Enhanced automatic tungsten inert gas (TIG) and electron-beam welding. Laser part marking and identification processes and more...*

Manufacturing: We have two (2) world class manufacturing facilities representing the highest level of excellence. From Lean Manufacturing & Supply Chain Management to in-house custom circuits, thick film hybrid and surface mount manufacturing, three large clean rooms, laser identification, TIG & electron-beam welding, heat treating, ESD protection & control, plasma cleaning, plating & coatings, we've got just about everything covered to produce the best products on the market.

Test & Verification: Designed to operate under some of the most formidable conditions, we have developed unique test equipment and procedures to ensure that our products are reliable, meet and exceed your requirements for quality and dependability. *Testing Capabilities: Thermal vacuum and thermal limits testing, shock, drop & vibration, pressure calibration (50 PPM to 40,000 PSI), susceptibility testing (EMI, RF), application and customer specific testing, as well as visual inspection, helium leak testing and more...*

We also provide calibration & re-calibration services to help keep your products within specification.

Quality Management: We operate under a complete quality management system which is ISO 9001/AS9100 certified for the design, development and manufacturing of all pressure and temperature products. Through our expanded "commitment to quality" our entire organization understands and is focused on consistently improving our Quality Management System.
